Test Assignment

Q.   Develop a basic slider with next and previous buttons using HTML, CSS and Javascript.

The features needed in the above are as following:

• It is a basic slider with the functionality of moving slides left and right on clicking the next and previous buttons.

• The slider must be designed as per the reference given.

• Use Javascript function in a way such that it should work with any no. of similar sliders on a single page or on entire website.

(For eg. - If we want to use the slider twice /thrice or any number of times , a single javascript function should work for both of them and should not interfere with other sliders at a particular run-time.)

CSS - Reference :

‹ PREVIOUS   •   NEXT ›

Thank you for your application.
